

"Boolean Tricks" with Logical Operators

Boolean Coercion via double NOT (double bang) operator	!!	e.g. !!'', e.g. !!1	false, true
Default value assignment via OR operator		e.g. const name = someInput 'Max'	someInput if not falsy, 'Max' otherwise
Use value if condition is true via AND operator	&&	e.g. const name = isLoggedIn && 'Max'	'Max' is set if isLoggedIn is true, false otherwise
