Functions

"Code on Demand"

```
function greetUser(name)
   { alert('Hi ' + name);
}
```

greetUser('Max');

As often as you want, passing in (different) parameter values!

You can (but don't have to) use *parameters* (e.g. *name*) and you can (but don't have to) return values (via *return*).

Every function execution then runs independent from (possible) other executions.
